

**Welcome to the next step in your
development as an equestrian**

DEVELOPMENT STARTS WITH YOU

When are you fully developed as a rider? In the process of developing Ryde Adjustable, we have been asking ourselves a whole lot of questions. Some are difficult to answer. Others are simpler. You are of course never "finished" as a rider. You can choose to see it as frustrating or as part of the charm.

Most people probably feel that development as a rider comes in stages. The largest steps tend to happen at the beginning. From not being able to ride at all, to being able to somewhat control your horse. Then the steps become smaller and smaller. Many who have come a long way in their development might even feel that they are stagnating.

We believe the Ryde Adjustable will help you take the next step as a rider. Thanks to the unique adjustment features, you will be able to make full use of your potential and communicate better with your horse.

You are among the first 500 to buy Ryde Adjustable. For us who created Ryde Adjustable, it's an amazing feeling knowing that you will soon get to share the same experience as we did when we tested Ryde Adjustable for the very first time.

We take this step together.

We are curious to hear how you experience your first encounter with Ryde Adjustable. Please get in touch and tell us at hello@ryde-equestrian.com.

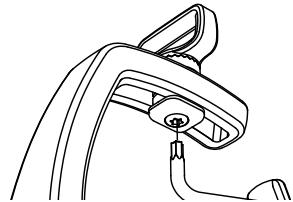

FINDING YOUR ADJUSTMENTS

Ryde Adjustable can be adjusted in three different directions. Use only Torx 25 wrench when adjusting. Otherwise, you may damage the screws.

1/ Lateral alignment/pronation

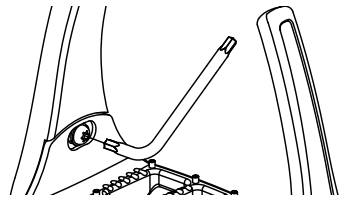

Loosen the screw under the stirrup attachment until the attachment comes loose and you can change its position. Then tighten the screw firmly when you have found the angle that suits you.

Screw for lateral adjustment and stirrup attachment

2/ Stirrup attachment

Use the same screw as the stirrup leather attachment, only loosen it a bit further until you can rotate the top loop. Then tighten the screw firmly in the position you prefer.

Screw for tread angle adjustment

3/ Tread angle

Unscrew the screw by the foot plate, adjust and then tighten the screw firmly at the desired angle.
